Summary

Senior Software Engineer with 3+ years of experience building scalable cloud solutions at Ernst & Young. Specialize in Java, Python, and AWS infrastructure, with a track record of improving system performance by 70%. Skilled in leading cloud migrations, architecting APIs, mentoring developers, and delivering enterprise applications serving thousands of locations.

Experience

Ernst & Young (EY) | NY, New York

Senior Software Engineer (Consultant) | 12/2024 - Present

- Owned end-to-end migration of 5+ features from on-premise legacy systems to AWS, designing data pipelines, schema transformations, and secure transfer protocols
- Optimized database queries and introduced Redis caching layer, reducing API latency by ~65%
- Engineered CI/CD pipelines using GitHub Actions and CloudFormation, cutting deployment times by ~30% across 12+ microservices
- Established release management processes including automated regression testing, rollback procedures, and deployment runbooks
- Led on-call rotations and production incident triage, reducing mean time to resolution through improved observability with DataDog

Software Engineer / Staff Technology Consultant | 08/2022 - 12/2024

- Developed Java (Spring Boot) APIs and PostgreSQL data layer for enterprise restaurant platform serving 3,000+ locations nationwide
- Architected event-driven messaging system using AWS Lambda, SNS, and SQS for asynchronous order and inventory updates
- Implemented Protobuf for service-to-service communication, reducing payload sizes by ~40% compared to JSON
- Built integration test framework using JUnit and Testcontainers, improving test reliability and coverage to ~80%
- Onboarded and mentored junior engineers on microservices patterns, code review standards, and agile ceremonies

Internal Involvement

- Championed AI integration across development workflows, introducing GitHub Copilot and LLM-based tools to accelerate code reviews and documentation
- Built internal proof-of-concepts demonstrating AI-assisted testing and automated code generation for Spring Boot services
- Led knowledge-sharing sessions on leveraging generative AI for debugging, refactoring, and rapid prototyping

Education

Virginia Tech | Blacksburg, VA

Computer Science | 06/2022

- Dean's List (2020, 2021, 2022)
- Beyond Boundaries Scholarship Recipient
- **Relevant Coursework:** Data Structures & Algorithms, Computer Systems, Database Management Systems, Software Design, Computer Organization, Comparative Languages, Computer Networks, Applied Combinatorics, Intro to GUI, Professionalism in Computing

Skills

Java, Python, JavaScript, C, Spring Boot, React, React Native, HTML/CSS, PostgreSQL, SQL, DynamoDB, Docker, Git, DataDog, Postman, AWS (Lambda, SNS, SQS, S3, CloudFormation), LaunchDarkly, JIRA
